Broken bones compilation

Patients and doctors need special care to avoid adverse outcomes after an orthopedic injury. At Henry Ford Health System, our orthopedic surgeon is an expert in bone treatment and works with all patients to prevent bone treatment complications. If you have complications, our team has deep experience in treating bone infections and other problems with recent advances. Complications from fracture or bone injury Most bone injuries are normally treated. However, some patients experience complications during the orthopedists therapy process where Henry Ford treats common bone healing complications, including: Bone infections (osteoporosis) Infection can occur when bacteria enter the body during injury. In general, infection can occur during surgery to reset the bones. Mismatched bone disorders (disorders) can be treated in abnormal positions and cause cancer, delayed union and fracture of nonunion, fractures that take longer than treatment than usual, called delayed unions. Nonunion fracture is one that fails to heal. Bone complications: what to look for It is important to know the warning signs of complications in bone treatment, so that you can alert your doctor. Getting quick care is important in the treatment of complications. Call your doctor if you notice the following signs: Venting chronic pain from fever sores, swollen limbs Treatment of complications in bone treatment Orthopedic specialists at Henry Ford are experts in diagnosing bone complications and searching for the right treatment. Your doctor may use the following treatment depending on the problem: Antibiotics: A drug that kills bacteria is often used to treat bone infections. Internal or external fasteners: Orthopedic surgeons attach rods, plates or screws to stabilize the bone. Bone transplant: Orthopedists A healthy bone transplant can be performed to repair and rebuild the bone that is suffering from untreated bone loss. Leader in Patient Studies for Bone Treatment The highlight of orthopedic care at Henry Ford is the study of patients. We're sure you know what to expect while treating - including signs of complications. Once you know what to look for, you can alert your doctor quickly and seek care. This can prevent problems or help us solve problems before they get worse. Bone treatment begins at Henry Ford We are here to support you during and after an orthopedic injury. Visit frequently asked questions from patients like you and learn how to take care of broken bones while you heal. Ready to see a doctor? Request an appointment or contact us for more information.
